

Internship Report

On

Cache Digitech Pvt. Ltd.

Ground Floor, CRC2 Building, 337, Sultanpur, New Delhi

BENNETT
UNIVERSITY
TIMES OF INDIA GROUP

Session: 2025-2026

Supervised by:

Mr. Akshay Kumar

(GenAI Developer)

and

Dr. Shakeel Ahamad

(Assistant Professor)

Submitted by:

Moksh Sharma

Btech. CSE (Data Science)

Enrollment No. E23CSEU0381

**SCHOOL OF COMPUTER SCIENCE ENGINEERING AND
TECHNOLOGY,**

BENNETT UNIVERSITY

CERTIFICATE

This is to certify that the student named Moksh Sharma (E23CSEU0381) of Programme Name Btech CSE, has undertaken an internship/industry project titled “Data Analyst Intern” at Cache Digitech Pvt. Ltd. from 02-01-2026 to 02-07-2026. This progress report is a bona fide record of the work completed during the above period.

Date: April 30, 2026

Internal Guide / Faculty Mentor (Name & Signature)

Dr. Shakeel Ahamad

Industry Mentor (Name & Signature)

Mr. Akshay Kumar

(Akshay_Kumar)

ACKNOWLEDGEMENT

I would like to thank the team at Cache Digitech for providing me with the opportunity to contribute to real projects and learn in a practical professional environment. I am also grateful to my mentors and colleagues for their guidance, feedback, and support throughout the internship.

I also acknowledge Bennett University, School of Computer Science Engineering and Technology, for providing the academic structure for the internship evaluation and progress report submission.

ABSTRACT

This report presents the work carried out during my internship at Cache Digitech, where I contributed across analysis, full stack web development, and generative AI. The internship involved understanding business requirements, interpreting raw technical and operational inputs, and converting them into clear, structured, and scalable solution flows. My work included contributions to projects such as TechBank.ai, CacheBI, Email Intelligence, and website development initiatives. These assignments focused on recruitment workflow automation, business intelligence structuring, email data processing, content organization, and platform-oriented web development. In addition to technical implementation support, I worked on improving documentation quality, feature clarity, process readability, and business alignment for internal and presentation-ready deliverables. The experience strengthened my skills in problem analysis, structured thinking, digital solution design, and practical software development in an industry setting.

Chapter 1: Introduction of the Report

1.1 Background

The internship at Cache Digitech provided exposure to practical business and technical problem-solving in a live industry environment. My role extended across three connected areas: analysis, full stack web development, and generative AI. This required understanding service lines, identifying the main purpose of technical and business inputs, structuring workflows, and supporting the development of digital solutions that were clear, usable, and aligned with business needs.

1.2 Purpose

The purpose of this report is to present the work carried out during the internship in a structured progress-report format. The report keeps the original content focused on analysis, full stack web development, and generative AI, and organizes it according to the required academic format.

1.3 Technology Used / Data Collection Methods

The internship work involved the following areas and methods:

- Generative AI-based workflow thinking for extraction, classification, matching, and automation.
- Full stack web development support through page planning, feature blocks, user-facing clarity, and interface logic.
- Data analysis and business intelligence structuring through dashboards, categories, and presentation-ready outputs.
- Data collection from raw notes, feature descriptions, project summaries, operational requirements, and business inputs.

1.4 Scope of the Internship

The work was not limited to coding alone. A major part of the internship involved interpreting raw notes, feature descriptions, project summaries, and operational requirements, then transforming them into structured outputs such as solution summaries, page content, task descriptions, and project-ready documentation. This improved both the technical flow and communication quality of the final deliverables.

1.5 Methodology and Work Approach

The internship work followed a structured approach. First, project inputs were reviewed to identify the problem statement, workflow, and expected output. Second, the information was reorganized into clear modules such as user journeys, feature blocks, dashboards, content sections, and backend-driven processes. Third, suitable technologies and implementation directions were mapped based on the project type. For web and platform-oriented tasks, the focus was on scalable structure, logical page flow, and user-facing clarity. For AI-oriented tasks, emphasis was placed on prompt-driven processing, structured extraction, classification, and automation. For analytics-oriented tasks, raw business data and fragmented inputs were converted into decision-friendly formats that supported interpretation and presentation.

Chapter 2: Overview of the Organization

2.1 Brief Overview of the Organization

Cache Digitech Pvt. Ltd. is the organization where the internship work was carried out. During the internship, the work was connected to practical business and technical problem-solving in a live industry environment.

2.2 Major Activities, Products and Services

The work included contributions to projects such as TechBank.ai, CacheBI, Email Intelligence, and website development initiatives. These assignments focused on recruitment workflow automation, business intelligence structuring, email data processing, content organization, and platform-oriented web development.

2.3 Relevant Branch / Office Details

Internship Organization: Cache Digitech Pvt. Ltd.

Office Location: New Delhi

Current Role: Data Analyst Intern, Cache Digitech Pvt. Ltd.

2.4 Internship Context

The internship involved understanding business requirements, interpreting raw technical and operational inputs, and converting them into clear, structured, and scalable solution flows.

Chapter 3: What I Have Learned

3.1 Duration of Internship

Internship Duration: Jan 2026 to Present

Current Role: Data Analyst Intern, Cache Digitech Pvt. Ltd.

3.2 Departments / Areas Assigned

The primary areas of contribution during the internship were analysis, full stack web development, and generative AI.

Area	Nature of Work	Typical Output
Analysis	Understanding raw business and technical inputs, identifying workflow logic, and improving clarity and sequencing.	Structured notes, summaries, requirement flow
Full Stack Web Development	Supporting solution structure, page planning, feature blocks, and business-oriented web implementation thinking.	Page content, modules, interface logic
Generative AI	Assisting AI-driven extraction, matching, classification, and automation-oriented solution design.	AI workflows, prompt-based outputs, smart processing

3.3 Responsibilities and Activities Performed

- Understanding raw business and technical inputs, identifying workflow logic, and improving clarity and sequencing.
- Supporting solution structure, page planning, feature blocks, and business-oriented web implementation thinking.
- Assisting AI-driven extraction, matching, classification, and automation-oriented solution design.
- Improving documentation quality, feature clarity, process readability, and business alignment for internal and presentation-ready deliverables.

3.4 Skills Gained

- Problem analysis and structured thinking.
- Digital solution design and practical software development.
- Requirement understanding and conversion of unstructured information into usable workflows.
- Business-friendly communication of technical ideas.
- Understanding of how AI-assisted workflows, web systems, and analytics thinking work together in real organizational contexts.

3.5 Conclusion: Overall Experience and Personal Takeaways

Across these projects, the common outcome was stronger alignment between business objectives and technical execution. The work improved my ability to understand requirements quickly, organize unstructured information, translate concepts into usable digital flows, and communicate technical ideas in a business-friendly manner. The internship also strengthened my understanding of how AI-assisted workflows, web systems, and analytics thinking can work together in real organizational contexts. My internship at Cache Digitech helped me build practical capability across analysis, full stack web development, and generative AI. Through contributions to TechBank.ai, CacheBI, Email Intelligence, and website development, me and my team gained hands-on experience in converting raw requirements into structured, scalable, and presentation-ready solutions. The experience strengthened both my technical foundation and my problem-solving approach for business-oriented digital systems.

Chapter 4: Progress Summary

4.1 General Description of Tasks Done

Across the reporting period, my work focused on structuring business inputs, supporting development-oriented solution planning, and contributing to AI-enabled, analytics-oriented, and web-based project workflows without including proprietary details.

4.2 Project Contributions

4.2.1 TechBank.ai

Objective: To support an AI-powered talent screening and recruitment platform that can organize candidate records, process job descriptions, and improve candidate-matching workflows.

Contribution: I worked on understanding the business flow of recruitment and structuring the project into clear functional components. This included organizing feature logic around resume handling, candidate records, matching flow, and analytics-oriented output.

Project Value: The platform brings recruitment activities into a more structured workflow by reducing manual effort in screening and helping teams move faster from job requirement to ranked candidate insights.

4.2.2 CacheBI

Objective: To convert business and operational information into structured, dashboard-oriented intelligence that can support internal understanding and business presentation needs.

Contribution: I contributed by organizing fragmented information into meaningful categories, helping define presentation-friendly output structures, and improving the readability and sequence of analytics-focused content. Creating Power BI dashboards to developing a BI platform CacheBI for converting raw data into dashboards for analysis.

Project Value: This work supports better data interpretation and helps transform raw information into a format that is easier for stakeholders to understand and use. Helps in creating dashboards with GenAI.

4.2.3 Email Intelligence

Objective: To support a system that can read, structure, classify, and process email data for practical business use cases such as summaries, escalations, lead identification, and administrative visibility.

Contribution: I analyzed the overall workflow of email ingestion and intelligent processing using GenAI and helped structure the communication flow into clear stages including intake, classification, and downstream action-oriented outputs.

Project Value: The project highlights how AI and backend workflows can be combined to automate communication-heavy processes and make large volumes of email information more useful.

4.2.4 Website Development

Objective: To support business-oriented website development through clear content flow, structured page planning, and service-aligned presentation logic.

Contribution: I worked on refining raw content into website-ready structure, organizing service information into logical sections, and supporting page-level clarity for digital presentation.

Project Value: This work improves website usability, strengthens communication of service offerings, and ensures that content is better aligned with user understanding and business positioning.

4.3 Milestones Achieved

- Structured TechBank.ai recruitment workflow into clear functional components.
- Organized CacheBI information into dashboard-oriented and presentation-friendly output structures.
- Mapped Email Intelligence workflow into stages including intake, classification, and downstream action-oriented outputs.
- Refined website development content into logical, service-aligned sections for digital presentation.

4.4 Skills and Tools Learned

- Generative AI
- Full Stack Web Development
- Data Analysis
- Business Intelligence
- Resume Screening
- Email Automation

4.5 Reflections on Challenges and Contributions

Across these projects, the common outcome was stronger alignment between business objectives and technical execution. The work improved my ability to understand requirements quickly, organize unstructured information, translate concepts into usable digital flows, and communicate technical ideas in a business-friendly manner. The internship also strengthened my understanding of how AI-assisted workflows, web systems, and analytics thinking can work together in real organizational contexts. My internship at Cache Digatech helped me build practical capability across analysis, full stack web development, and generative AI. Through contributions to TechBank.ai, CacheBI, Email Intelligence, and website development, me and my team gained hands-on experience in converting raw requirements into structured, scalable, and presentation-ready solutions. The experience strengthened both my technical foundation and my problem-solving approach for business-oriented digital systems.

Weekly Work Logs

Week No.	Dates (From-To)	Task Description	Hours Spent	Mentor Signature
1-2	Reporting Week 1 & 2	Reviewed project inputs to identify problem statements, workflow, and expected outputs.	8 hours/day	Akshay_Kumar
3-4	Reporting Week 3 & 4	Structured analysis, full stack web development, and generative AI contribution areas.	8 hours/day	Akshay_Kumar
5-6	Reporting Week 5 & 6	Worked on TechBank.ai recruitment flow, resume handling, candidate records, and matching logic.	8 hours/day	Akshay_Kumar
7-8	Reporting Week 7 & 8	Organized TechBank.ai feature logic and analytics-oriented outputs.	8 hours/day	Akshay_Kumar
9-10	Reporting Week 9 & 10	Worked on CacheBI categories, dashboard-oriented structures, and presentation-friendly outputs.	8 hours/day	Akshay_Kumar
11-12	Reporting Week 11 & 12	Supported BI platform thinking for converting raw data into dashboards for analysis.	8 hours/day	Akshay_Kumar
13-14	Reporting Week 13 & 14	Analyzed Email Intelligence ingestion and GenAI-based classification workflow.	8 hours/day	Akshay_Kumar
15-16	Reporting Week 15 & 16	Refined website-ready content flow, service information, and page-level clarity.	8 hours/day	Akshay_Kumar

Annexures

Annexure A: Screenshots of Non-Sensitive Outputs

The following screenshots are included as non-sensitive visual references to the project areas mentioned in the progress report.
